

Voyager® 6.5.1 Bug Fixes:

- [64309](#): acq:Search for PO does not automatically place a cursor in search field
- [83348](#): placing a hold in CIRC the PickUp At box is not defaulting to login loca
- [107557](#): Circ: unable to connect to offline circ gets run time error 65099
- [122885](#): CIRC:discharge alert character limit cause run time error 6 overflow
- [128116](#): CAT:Heading Separators Missing
- [128563](#): Circ: circjob 31 results in coredump, fails to apply suspensions

Note on the fix for [128116](#): (CAT:Heading Separators Missing)

This fix will have the SysAdmin setting for the headings separator correctly applied for those records created or edited from the time of applying the patch and thereafter. Optionally, in order for all existing records to have the SysAdmin setting for the headings separator correctly applied then a headings regen is required.

You can apply the patch and then request to have the headings regen run at a date in the future. Contact upgrade@exlibrisgroup.com to schedule the headings regen. This would mean that all records will have the SysAdmin setting for the headings separator correctly applied.

You can also choose to apply the patch and choose not to request the headings regen to be run. This would mean that there will be some records, only those edited since this option was introduced, that may have the SysAdmin setting for the headings separator incorrectly applied.

Voyager® 6.5.1 Enhancements:

- [96483](#): Masking Social Security numbers in Acquisitions

114449: CAT: tag table update for Integrating Resources in leader 07
Only thing needed from development is a tag table update
Edit master.cfg under the [RecFormat] to contain ai=Serial

- [121317](#): WebV: Syndetics: wants limit to 1 image per record -instead of EVERY 020

* Note – all enhancements, including those not in the Voyager KnowledgeBase, are described in the [Release Notes](#). Problem 114449 is not described in either the Release Notes or the Voyager KnowledgeBase.
