# *Netscape*

SYSTEMS TechTip NO.9
Setting up Ewan

Adding addresses in Ewan

To start ewan, locate the following icon in program manager 🖰 double click to start. You will be faced with the dialogue box below:

This is where you can setup a list of sites you wish to connect to. To add a new address click on new, and you will see the address dialogue:

For this exercise we will add the Library's Online Public Access Catalogue.
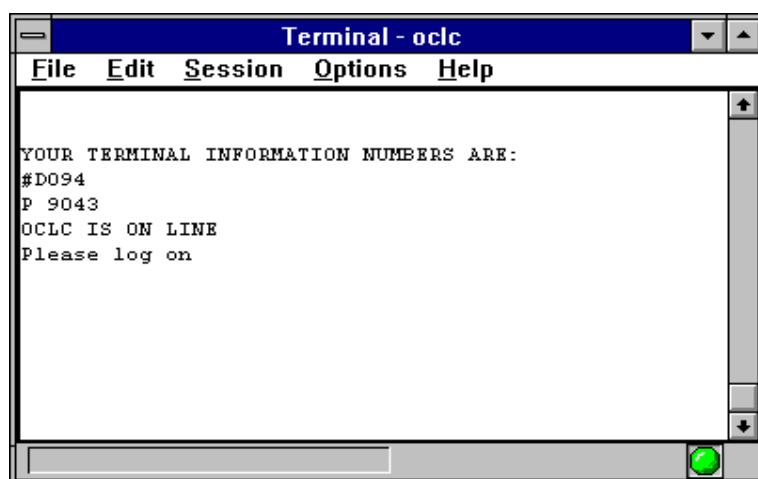

Netscape

Adding the OPAC to the address list

- Place the cursor in the **Name** box and click. In this box type *Eulib Catalogue* <press return>.

- Now click the cursor in the **Network address or host name** box and type *eulib.ed.ac.uk* <press return>.

- In the **Service (port)** box make sure *Telnet* is selected.

- Now click the OK button and the address should appear at the top of the list.

You can enter as many site addresses as you wish, here are a few more you should add:

Name	Network Address / Host Name	Service (port)
Eulib Catalogue	eulib.ed.ac.uk	Telnet
Eulib Staff	eulib.ed.ac.uk	Custom: 24
Bids	bids.ac.uk	Telnet
Medline	libcd1.lib.ed.ac.uk	Telnet
Curl	130.88.203.18	Telnet
Oclc	connect.oclc.org	Telnet

Now check your addresses are working by highlighting each of them separately and clicking on the OK button.

```
Terminal - oclc
File   Edit   Session   Options   Help

YOUR TERMINAL INFORMATION NUMBERS ARE:
#D094
P 9043
OCLC IS ON LINE
Please log on
```
