Ex Libris

Voyager ® 6.5.3 Bug Fixes:

37422	Circ:Request Maintenance:Right- hand columns are hidden/unreadable.
37693	Acq: EDI - QTY segment always 1, even for multiple copies
40299	reporter: Notice Archive Processing Options,"Print" does't send archived
46039	WebV: WebV will only identify the first 80 characters of a URL string
50334	ACQ:edi:RFF+BFN' section repeated twice for each line item
50544	Webv:Headings disabled*gif displays instead of down*gif in browse
55835	media:"run-time error 9 - subscript out of range" error message
66067	Acq: View menu > EDI > Process not working (left hand bar works)
74918	cat:pick and scan -- suppress in opac not taking effect until save to db
78814	SYSAD: Item Statistical Categories require at least one Patron Stat. Cat
81230	SysAdmin: BulkImp Rule: Fund Default Code drop down box is too narrow
85940	ARS: Auto Storage check box greyed out even though db configured for it
87323	SA: rte 380 invalid property value when creating new call slip rule
88540	Cat: GHC: catjob 13 cleared out things in queue that it shouldnt have
94531	WebV:certain titles not appearing during a limited search.
97920	WebV: Truncation searches work, however, now produce erroneous message
99853	Barcode search, "Item Not Found", item_id not in bib_item
100565	CallSlip:Re-print of call slips causes run time error 5 stopping process
105648	RPT: Reporter errors out on invoice vouchers with credit amounts
105095	circ: cannot right click and collect fines
106733	bulkimport: unable to create mfhds if bib has 2+ 856 and 2+ 856>206 char
106759	cat: 2nd indicator (non-filing chars) ignored if 245 contains $6
109019	Circjob38:log reports show 0 records updated, but tables are updated.
112372	Ptrnupdt: dupe e-mail addresses when sif has blank temp address
113431	Cir:not retrieving records that are being selected
114420	SELFCHECK: Overdues not accurate for patron information in 3M Selfcheck
117112	OPAC:TKEY list produces blank list after NAME@ search
117527	WebV: Absolute URL error in WebVoyage
122232	OPAC:OPAC renewals permitted by expired patrons
122474	ACQ:Serials History: Can't sort issues by issue identification
122663	SA:can uncheck Pickup Location for loc that is Default Pickup Location
124860	UB:UB Charges counter decrements by 2 not 1, allowing negative values
125090	MS:Supervisor override results in run time errors.
125361	MS:booking by equipment type uses default policy settings
126041	RPT: Header fields in emails sent from Reporter are not RFC compliant

126221   BULK: Assertion failed error messages when use -r or -m w/ Bulkimport
127955   EDI:Loading report error "Run-Time Error '9' subscript out of range"
128582   MS:no media notices:Failure selecting default Media Policy Patron Group
129025   ub/WebV:circjob 29 deleting too many rows, orphaning others
129712   CIRC:discharge recall to hold shelf increments counters incorrectly
130491   Circ:hold expiry date set to correct date, but time always 00:00 00
130780   SC: 64 response horizontal tab (HEX 09) added
130994   ACQ: unable to generate invoice from purchase orders
131344   WebV: in V6 GKEY^ TKEY^ SKEY^ does not ignore multiple spaces
133703   Z3950: An OPAC request to a port set as UTF8 is returned as MARC8
133994   webv: scan chars in Request Group names not appearing in webv
134187   Circ/UB: Can't place hold on any database error

Notes on fixes:

129712 CIRC:discharge recall to hold shelf increments counters incorrectly
The fix in 6.5.3 is a script that will prevent the counters from decrementing to a negative value and will set negative values to 0 as the negative value was causing self check machines to shut down. The Voyager 6.5.4 release will provide a complete resolution.

-Regens-
Each of the fixes below has a binary component that will be delivered as part of the patch set, plus a data correction component that requires a regen. You can choose to:
- Apply the patch set without requesting Ex Libris to run the regens
- Apply the patch set and perform the regens, if a Cert 500 site
- Apply the patch set and request Ex Libris (upgrade@exlibrisgroup.com) to run the regens

The binary component will fix the specific issue for edited/added records, from the time of applying the patch set and onwards. The data correction component will fix the specific issue for existing records at the time the regen is performed.

Regens from 6.5.3 patch set:
106759: cat: 2nd indicator (non-filing chars) ignored if 245 contains $6
This fix will place correct data in the keyword and left anchored bib index, from the time of applying the patch set and onwards.

Requesting the optional keyword and bib left anchored regens will correctly populate the keyord index and bib left anchored index, respectively, for existing records at the time the regens are performed.

The recommendation is to request these regens if applying the patch set. The time it takes for these regens to run is dependant upon the total number of bibliographic records.

Regens from 6.5.1 and 6.5.2 patch sets:

121473: WebV: Thumbnails aren't displaying
124069: CAT:multiple 856 fields cause corruption in ELINK_INDEX table

Both of these fixes (originally released in the 6.5.2 patch set) will place correct data in the *ELINK indexes for edited/added records, from the time of applying the patch set and onwards.

Requesting the optional *ELINK regen will correctly populate the *ELINK indexes for existing records at the time the regen is performed.

The recommendation is to request this regen if you have 856 tags in either your bibliographic or holdings records then. The time it takes for this regen to run is dependant upon the total number of 856 tags.

129371: Index/Search/Import: ISBN-13 indexing in 020 field
129826: Search:Parenthetical qualifiers are not ignored in ISB3 and/or 020A

Both of these fixes (originally released in the 6.5.2 patch set) will place correct data in the keyword index and bib left anchored index for edited/added records, from the time of applying the patch set and onwards.

Requesting the optional keyword and bib left anchored regens will correctly populate the keyord index and bib left anchored index, respectively, for existing records at the time the regens are performed.

The recommendation is to request these regens if applying the patch set. The time it takes for these regens to run is dependant upon the total number of bibliographic records.

128116: (CAT:Heading Separators Missing)

This fix (originally released in the 6.5.1 patch set) will have the SysAdmin setting for the headings separator correctly applied for edited/added records, from the time of applying the patch set and onwards.

Requesting the optional headings regen will have the SysAdmin setting for the headings separator correctly applied for existing records at the time the regen is performed. This would mean that all records will have the SysAdmin setting for the headings separator correctly applied.

There is no recommendation on requesting this regen, as this is strictly a display issue.
