Voyager® 7.0.2 Bug Fixes

Issue Number	Summary
16384-2737	Patron PIN chaos
16384-2657	FPC:Unreadable PO causes FPC to fail
16384-3105	Clients cannot encrypt
16384-3185	UCAT – patrons cannot login
16384-1281	Pbursar:incorrect totals transferred/not recorded in SIF when using -p -m
16384-1602	CIRC:"A database error occurred, unable to find patron" After placing request
16384-1617	CIRC:CLUSTERS:Get database error when Collect fines after discharge for stub
18213	circ/UB:cluster:db error unable to fine patron when remap existing stubs
16384-2098	UB/CS: Full stub not created/patron name not displaying in call slip
16384-1876	Keyboard shortcut for vendor search is incorrect
16384-2401	Marcexport:export holdings:"ORA-00942: table or view does not exist" for serials
16384-2385	ACQ:Subscription Maintenance:"Change Date" greyed out for first issue
15869	Acq: Serials: Predictive Component Pattern: "Expected On" disappears
16123	Circ:Aer two patron searches can not retrieve "display search index"
16384-2530	REP: Later email notices are skipped when server rejects one address
15576	Acq:Fund:Can assign a Summary Fund via Fund Code on line item
19172	SA:can delete item type still associated with matrix
16067	Acq: 3 times in marked_issue, 2 entries with -1 for copy_id and loc_id
15200	ACQ:aer editing line item, returns to the top/bottom of the list
15768	Acq:Quick Line Item, shows incorrect Ledger and blank Commit to Fund
17965	Acq:Ser check in-serials history wrong call number displayed
17914	Circ:two open exception days in a row hr./min. loans are due on 2nd day
16384-1634	CIRC:CS request processed w/o notification when hit Cancel on charge
18400	CAT:Copy button in the Headings List box does not paste selected heading
16384-289	WebV:Patrons with maximum number of items on loan allowed unable to renew items
16384-593	CIRC:Batch Forgive Appears in Posting Type drop down
18821	ACQ:An error occurred while appending the line item to the invoice!
17213	circ:Patron Block messages pop-up by barcode entry, but not name.
16384-145	UB/Circ:if phone type mismatch between home and stub can't renew/cha
18737	Circ:callslip w/ place on hold shelf not using hold shelf life interval
16384-1345	CAT: unable to unlink boundwiths
18768	VIC/CAT: catalog records can't be deleted for patron-canceled requests
18697	FPC: Fund Snapshot Aer Rollover Report: Last year's funds & duplicated
16384-209	CAT/OPAC: MFHDs aren't displaying in order with Oracle 10
16384-1730	webv/UB: My Account Charged Book list not separated by UB Library
16384-2305	UB/WEBV: fine/fee info not divided by institution

16384-1601	new WebV:Patrons with blocks are unable to log in to their account
16384-1156	WebV: External Patron Authentication - Doesn't bypass default login page
16384-1793	WebV:going to BASIC search, search "within" area is reset to first option
16384-1731	webv: My Account gives no indication when an item is not renewed by system
16384-1809	WebV: Path to ieFixes.css is hardcoded as en_US
16384-1827	WebV: Detail page shows inaccurate item count
16384-1812	WebV: Default Author search results page says Subjects
16384-1874	Recalled Renewed items say No Information Available in new WebV
16384-1073	WebV: NewVoyage needs a robots.txt to block spiders
16384-2449	WEBV:856 links in mfhd not displaying
16384-2625	WEBV: Syndetics links to ""more info"" can't be set up through displaycfg.xml"
16384-2545	WebV: Syndetics cover art not showing in IE7
16384-257	ACQ: No order to related invoices
18833	CAT:INNReach export job doesn't send new ocn-prefixed system numbers
16384-1393	Voy/Primo extract script: Diacritics in 959 field not extracted correctly

51 bug fixes

More details on these bugs are in the **eService Knowledge Base**. For information on how to search the Knowledge Base see http://supportweb.exlibrisgroup.com/cust/voy/services/eService/cust_guide.pdf

Details on the *Voyager® 7.0.2 service pack including a link to instructions are available at http://supportweb.exlibrisgroup.com/cust/voy/upgrade/7.0.2/updecide.html.

*New Voyager® clients necessary for the *7.0.2 service pack*: YES. To get the new clients see SupportWeb at http://supportweb.exlibrisgroup.com/cust/voy/upgrade/clients.html.

Please note that some fixes included in the *Voyager® 7.0.2** service pack include a **modification to a file on the server used by WebVoyage**. These bug fix Issue numbers include: 16384-2625, 16384-2545, 16384-1730, 16384-1812, 16384-1874, 16384-1793, 16384-1731, 16384-1730, 16384-2625, 16384-2449, 16384-1809, and 16384-1156. If you are not experiencing these bugs or do not want the bug fixes, you can skip this information. If you are experiencing one or more of these bugs and want the full bug fix, please read below for details.

The Voyager® 7.0.2 service pack does not modify any files in the /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui directory except for the exl_default skin. Therefore, there will be untouched skins after the service pack has been applied. With this in mind, there are 3 ways to handle these file changes when the service pack is applied:

1) Customer does not modify their customized files and therefore does not get some of the WebVoyage fixed file information.

2) Customer takes the content from the changed files in /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/exl_default and merge in the file changes to their customized skin(s) to fix the issues. The specific files and changed information is documented in supportweb.exlibrisgroup.com/cust/voy/upgrade/7.0.2/index.html#uppost.

3) Customer copies the exl_default skin and merge their customizations into the copy. Use this copy as their customized skin.

Regens necessary for bug fixes in the Voyager® 7.0.2 service pack: None.

REGEN information from versions below 7.0.2:
Each of the fixes listed below have a server binary component that will be delivered as part of the Voyager® 7.0.2 service pack and also include an index correction component that requires a regen for *previously* created MARC records.

How do you know if a regen should be run? It depends on what version you are upgrading from:
- • If you are upgrading from Voyager® 5 or below to Voyager® 7.0.2, a full regen will be run as part of the upgrade.
- • If you are upgrading from Voyager® 6.1 or 6.2 to Voyager® 7.0.2, a full regen except for Authority Left-anchored should be run.
- • If you are upgrading from Voyager® 6.5.x (6.5.1, 6.5.2, 6.5.3, 6.5.4) to Voyager® 7.0.2, running of the regens is optional. Read the information below regarding the bug fixes and regens. If you have data that relates to any of these bugs, it is recommended that the regen to fix the data be run (e.g. if you use Dewey call numbers in mfhds, the call number regen for fix to Issue 17179 should be run). Tell your Upgrade Engineer which regen(s) you would like run.
  - • If you are upgrading from Voyager® 7.0.1 to Voyager® 7.0.2, no regens are necessary.

You can choose to:
- • Upgrade without requesting Ex Libris to run the regens
- • Upgrade and request Ex Libris to run the needed regens
- • Upgrade and perform the regens yourself, if a Cert 500 site

To schedule your upgrade with an Ex Libris Upgrade Engineer:
Use eService to open an upgrade incident. Under the field "What type of difficulty are you experiencing?" select "Upgrade." **Telephone**: Press 4 1-877-445-5693 U.S. / Canada +800-44443374 Other International

Regens from Voyager® 7.0.1:

Issue 17179: cat: dewey call number normalizing with comma instead of without

This fix will place correct data in the left anchored call number index for holding (mfhd) records created or updated from the time of applying the patch set and onwards. Requesting the optional call number left anchored regen will correctly populate the call number left anchored index for existing holding records at the time the regen is performed. The recommendation is to request this regen if you use the Dewey call number classification scheme in holding records. The time it takes for this regen to run is dependant upon the total number of holding records in the database.

ssue 18500: Cat:2nd cannot use proper non-filing 2nd indicator in 880-245 tags
Issue 19045: INDEX:No title indices when special character or diacritic in non-filing

These fixes will place correct data in the bibliographic left anchored index records created or updated from the time of applying the patch set and onwards. Requesting the optional bibliographic left anchored index regen will correctly populate the bibliographic left anchored index for existing bibliographic records at the time the regen is performed. The recommendation is to request this regen if your bibliographic data contains non-roman text. The time it takes for this regen to run is dependant upon the total number of bibliographic records in the database.

Regens from 6.5.3 service pack:

Issue 18042: cat: 2nd indicator (non-filing chars) ignored if 245 contains $6
This fix will place correct data in the keyword and left anchored bib index for bibliographic records created or updated from the time of applying the patch set and onwards. Requesting the optional keyword and bib left anchored regens will correctly populate the keyord index and bibliographic left anchored index, respectively, for existing bibliographic records at the time the regens are performed.
The recommendation is to request this regen if you have bibliographic records with subfield 6 in the 245 tag. The time it takes for these regens to run is dependant upon the total number of bibliographic records.

Regens from 6.5.1 and 6.5.2 service packs:

Issue 18840: WebV: Thumbnails aren't displaying
Issue 19137: CAT: multiple 856 fields cause corruption in ELINK_INDEX table
Both of these fixes (originally released in the 6.5.2 patch set) will place correct data in the ELINK indexes for edited/added bibliographic and holdings (mfhd) records, from the time of applying the patch set and onwards. Requesting the optional ELINK regen will correctly populate the ELINK indexes for existing bibliographic and holdings (mfhd) records at the time the regen is performed.

The recommendation is to request this regen if you have 856 tags in either bibliographic or holdings records in your database. The time it takes for this regen to run is dependant upon the total number of 856 tags.

Issue 18872: Index/Search/Import: ISBN-13 indexing in 020 field
Issue 19075: Search:Parenthetical qualifiers are not ignored in ISB3 and/or 020A
Both of these fixes (originally released in the 6.5.2 patch set) will place correct data in the keyword index and bibliographic left anchored index for edited/added records, from the time of applying the patch set and onwards. Requesting the optional keyword and bibliographic left anchored regens will correctly populate the keyord index and bib left anchored index, respectively, for existing records at the time the regens are performed.
The recommendation is to request these regens if ISBN data exists in the bibliographic records in your database. The time it takes for these regens to run is dependant upon the total number of bibliographic records.

Issue 18949: (CAT:Heading Separators Missing)
This fix (originally released in the 6.5.1 patch set) will have the SysAdmin setting for the headings separator correctly applied for edited/added records, from the time of applying the patch set and onwards. Requesting the optional headings regen will have the SysAdmin setting for the headings separator correctly applied for existing records at the time the regen is performed. This would mean that all records will have the SysAdmin setting for the headings separator correctly applied. There is no recommendation on requesting this regen as this is strictly a display issue.
